

Rotor – repairs & refurbishments

Rotor refurbishment in the Service Center Münsterland

Rotor after refurbishment

Full industrial life cycle management of crusher rotors to increase the rotor lifetime

When your rotor is due for repair or refurbishment, thyssenkrupp offers their service centers and qualified personnel to carry out the required work. Our experts assess the current condition of the crusher rotor and then provide a report on the condition and the required spare parts scope. Thus, we offer all stages of the repair- and refurbishment work including dis- and reassembly on site, if requested.

Our team gives you the opportunity to increase the rotor lifetime. Therefore we provide a full range of services - starting with a simple assessment, over on-site repairs, to finally full workshop refurbishments in one of our service centers near to you.

Through the regional set-up of thyssenkrupp's service centers, we can provide our global expertise through-out local specialists. We understand it is crucial to ensure a short reaction time as crushers are one key-equipment in the raw material production line.

thyssenkrupp as OEM is able to supply all components and refurbishments to our thyssenkrupp cement crushing plants, which also include parts of former companies, e.g. O&K, Hischmann, MIAG, etc.
