

# polysius® repair service and installation of spare parts

## Your reliable partner regarding costs and time

We offer you a worldwide repair service and installation of spare parts for your cement plants.

We support you during the whole project, from planning to the preparations and, last but not least, the execution – everything from a single source. This prevents loss of information and conflicts during order processing as well as interface problems.

Thanks to many years of experience in coordinating and processing large-scale projects, we are able to offer you customised solutions.

As for quality and adherence to schedules, we are known to meet the highest requirements.

We offer comprehensive services for:

- Rotary kilns
- Clinker coolers
- Mills
- High-pressure grinding rolls
- Separators
- Crushers
- Blending beds

Upon request, our services are also available for further machines.

When you are planning and preparing large-scale projects, our experts are able to intensively support you, for instance, by:

- Describing the current situation ("actual condition")
- Determining the planned scope of work ("target condition")
- Preparing the planned work with all details while taking minimum downtime into account
- Defining the performance boundaries
- Selecting the contractors
- Drawing up schedules and assessing risks
- Planning and preparing the required service activities, for instance, for a rotary kiln:
  - Measuring of the kiln shell
  - Check of the bearings and supporting rollers
  - Recording of the kiln deformation
  - Inspection of the kiln drive

### Your service advantages

- Supervision and coordination from a single source – for engineering, procurement and installation
- Service for all thyssenkrupp and other OEM plants
- Know-how in all phases of work execution, assembly and installation
- Worldwide working relationship within thyssenkrupp as well as with local sub contractors
- If necessary expert knowledge on site via live support
