

Revamps & outages

Over time, the demands placed on your production plants change. In support we offer you our thyssenkrupp Polysius services in the field of **revamps, modernization and renovation.**

With innovative solutions, modern parts and customized upgrades we help your plants to become up-to-date. Cutting-edge process technology and modern components increase the lifetime of your plant. Thereby, our services effect individual plant components and the plant as a whole.

Our revamp and modernization projects

- **expand production capacities** of your plant, ensure
- **better plant availability** and
- optimize your plant for the ideal use of possibly changing raw materials and fuels.

Maintenance costs and **unplanned downtimes are reduced.** Moreover, with the aid of state-of-the-art technology and the modernization of your plants, we assist you to

- reduce energy consumption and
- meet environmental standards.

The implementation of revamps from a single source, the subsequent commissioning and the individual training of your staff with respect to the new technologies, ensures **high product quality and availability for your production plant.**
