

# Spare Parts Management

In the **spare and wear parts business**, we focus on **shortening the unscheduled downtimes** of our customers' plants and **improving plant performance**.

To achieve this, our team of experts examines the individual production processes and based on their OEM expertise and new material technologies, develops **suitable wear part solutions** for the respective application in combination with appropriate business models.

We are experts in supplying spare and wear parts for your plant – over its entire lifetime, **at the right time, and of the right quality**.

After all, the right spare and wear parts are key to the **availability and performance of your plant**.

Thanks to our **long-term experience as an OEM supplier**, we can provide innovative spare parts concepts to meet your quality and performance requirements: on the one hand, the engineering and manufacturing of individual spare parts in line with your requirements; on the other hand, the ongoing development and enhancement of spare parts and components to increase the availability and performance of your plant.

We also offer spare and wear parts for plants that were engineered and erected by third parties.
